

Gain Complete Project Visibility By Optimizing All Resources

CMiC'S RESOURCE PLANNING MODULE ANALYZES YOUR RESOURCES TO MAXIMIZE UTILIZATION AND DRIVE DEEPER RECOVERABLE COSTS

The Resource Planning summary page allows the user to quickly evaluate all assigned and unassigned field resources, personnel and equipment.

“The greatest benefits of deploying CMiC's Resource Planning application have been getting a centralized view of everyone across the organization, seeing what activities they are doing and for how long, and learning about the potential of resource availability for additional projects.

Sub-optimal resource planning is a frequently overlooked contributor to construction's wider productivity problem. Over- and underutilization, seasonal peaks and valleys, and competing demands are only a few of the challenges firms face when trying to manage the many overlapping variables of a project, such as time frames, labor, equipment, materials and cost constraints.

Likewise, many firms make the mistake of limiting the scope of their resource planning to simply managing resource availability. Instead, resource planning should account for—and provide proactive insights into—what a firm needs to successfully deliver a project on time and on budget, even before placing a bid. A proactive resource planning capability that can draw data from every corner of the enterprise will not only maximize utilization, but also can predict recruitment and resourcing needs to drive deeper recoverable costs.

CMiC Resource Planning is a visual resource management module that delivers long term, current and historical insights because it prepares and manages resources at every stage of the project lifecycle. Unlike other resource management or scheduling tools, CMiC's Resource Planning is part of a single database platform that unifies financials, projects, resources and content assets to provide a holistic 360-degree analysis of your resources. Because the tool is part of the same platform where human capital, job costing and previous opportunities are managed, firms can hone in on the specific details of every resource, including employee skills and complete employment records. Proactive Resource Planning from CMiC is the most effective way to optimize all your resources across every project.
