

A Complete Software Platform Purpose-built for Construction

CMiC MAXIMIZES THE VALUE TO CUSTOMERS THROUGH ITS COMMITMENT TO CONTINUOUS INNOVATION

COMPANY HIGHLIGHTS

- 25% of the *ENR Top 200* use CMiC
- After the company launched its full suite as a cloud service, more than 250 construction firms have chosen CMiC in the past three years alone
- More than \$100 billion in construction projects have been managed through CMiC
- Nearly 10% of building construction dollars in North America run through CMiC

Founded more than 40 years ago, CMiC has a rich history in construction. With a robust suite of highly configurable software, CMiC remains the only ERP and field solutions platform that is purpose-built for construction. Unlike other software providers, which have relied on acquisitions or “bolted-on” integrations with third-party vendors, CMiC has built, tested and deployed a full set of capabilities on top of a single database platform—and transformed how large and mid-sized construction firms optimize productivity, minimize risk and drive profitable growth.

WEB INTEGRATION

The CMiC platform seamlessly connects a construction firm's entire team, from the field to headquarters. With everyone—from site supervisors and equipment managers to accounting staff and project managers—working with a single version of truth, construction firms can ensure that their teams are moving toward the same goal: completing all projects on time, within budget and profitably. The CMiC platform can be delivered as an enterprise-wide platform—CMiC Enterprise—or as a narrowly focused solution for field operations—CMiC Field.

CMiC Enterprise includes a complete set of unified capabilities. Financials—which includes GL, AR and AP management—enforces rules and achieves compliance with fiscal best practices and project specifications. Enterprise Planning enables proactive resource planning, opportunity management and financial forecasting. Enterprise Content Management (ECM) organizes and manages all content assets—from transaction records and safety inspection reports to invoices and drawings. Human Capital Management delivers best-in-class employee lifecycle management capabilities—from talent acquisition and robust human resource management to payroll and employee self-service. Asset Management controls materials costs, accelerates the procurement process and optimizes inventory management. Corporate Risk Management ensures regulatory compliance with all standards at the local, state and national level.

CMiC Field enables a construction firm to complete complex projects with tightly managed costs and time frames. As part of CMiC Enterprise or as a standalone solution, CMiC Field combines Project Management and Project Controls to enable seamless collaboration and integrated project delivery. In addition, CMiC Field optimizes forecasting and resource planning with its financial underpinnings, providing verified costs for every transaction source. With anytime, anywhere real-time access through smartphones and tablets, an intuitive interface, and all the power of the full platform, CMiC Mobile streamlines data collection, workflow management and analytical reporting for a construction firm's entire field team.

Throughout its history, CMiC has been committed to putting customers first. The company is privately owned—with no outside investors—so it's always had the freedom to make decisions focused solely on providing the best value to its customers. Instead of getting distracted with external sources of capital or short-term investor returns, CMiC has relied on the estate of its founder and its own cash flows to continue its aggressive investments in product innovation. Furthermore, many of CMiC's insights about industry requirements and trends come directly from its customers. CMUG, a non-profit group of CMiC users representing hundreds of companies across North America, has played a pivotal role in driving CMiC's product roadmap and investment priorities.
